SUMMARY

Android Developer specializing in Kotlin, Jetpack Compose, Firebase, Room Database, and REST APIs. Experienced in building scalable Android applications with clean architecture and modern UI. Passionate about UI/UX design and integrating AI-powered features into mobile applications.

TECHNICAL SKILLS

Kotlin	XML	Room	Coroutines	Android Studio
Python	Jetpack Compose	Firebase	MVVM	Git & GitHub
Dart	Flutter	REST APIs	Clean Architecture	Figma

PROJECTS

AI Expense Tracker | [GitHub](#)

- AI Expense Tracker is a Jetpack Compose Android app for tracking expenses, budgets, analytics, recurring payments, and AI-powered categorization.
- It uses Room for offline storage and cloud sync, and multi-device backup.

TrenNex - E-Commerce Android App | [GitHub](#)

- TrenNex is a modern e-commerce Android application developed using Kotlin and XML, focused on creating a smooth and user-friendly shopping experience.
- The app features OTP-based login UI, dynamic product browsing, Location Handling and more.

TrenNex UI/UX Design | [GitHub](#)

- The UI/UX of TrenNex is designed with a modern, clean, and interactive shopping experience in mind.
- The application follows a minimal yet visually appealing design system inspired by leading e-commerce platforms while maintaining its own unique identity and smooth user flow.
